

TMC | SKYE

Alfalfa

with **EMERGENTST**

**Early
Maturing,
Highly
Resilient**

- TMC Skye is a very early harvest maturity reaching late bud or early flower 3 to 5 days ahead of most dormant alfalfas.
- Very fast green-up after harvest and accelerated growth to harvest maturity gives TMC Skye the maximum tonnage advantage.
- Ideal for growers who aggressively manage their established alfalfa acres, TMC Skye is a fast-growing variety for production areas that use fall dormancy 4 and 5 alfalfas and expect 4 or more cuts each season.

PEST PACKAGE

DISEASES

Anthraxnose	HIGH RESISTANCE
Aphanomyces-Race 1	HIGH RESISTANCE
Aphanomyces-Race 2	RESISTANT
Bacterial wilt	HIGH RESISTANCE
Fusarium wilt	HIGH RESISTANCE
Phytophthora root rot	HIGH RESISTANCE
Verticillium wilt	HIGH RESISTANCE

INSECTS

Blue alfalfa aphid	RESISTANT
Cowpea aphid	RESISTANT
Pea aphid	MODERATE RESISTANCE
Spotted alfalfa aphid	RESISTANT

NEMATODE RESISTANCE

Northern root knot	RESISTANT
Stem nematode	RESISTANT

AGRONOMIC FEATURES

Yield rating	HIGH
Fall dormancy class	FD 4
Winter hardiness class	WS 1.8
Multifoliolate leaf expression	47%/Low MF
Regrowth rate	1.9

1.8 Winter **SURVIVAL** Rate

EMERGENTST

Emergent ST is premium seed-applied technology uniquely formulated for alfalfa.

- Emergent ST offers multiple modes of action for more complete disease control – including superior Rhizoctonia resistance.
- Backed by research, Emergent ST consistently delivers higher first cutting yields and ultimately results in a vastly superior ROI for your seed treatment investment.
- Emergent ST applied to the seed coat leads to a healthier plant and visibly stronger stand establishment, thus reducing the risk of replant.
